

How Contagious Pathogens like C.Diff are Spread

"52"
Contagious Pathogens in Fecal Waste, they are all transmitted "Fecal/Oral".

- C.DIFF
- VRE
- ECOLI
- NORO VIRUS
- UTI
- & MORE!

The LOU LOU Shower Chair System is a shower containment device designed to keep incontinent waste off the floor and off those who tend to residents in Long Term Care facilities.

A June 30, 2008, memo from the EPA notes that the spores of C.diff can remain viable for months on contaminated surfaces. The disease sickens about half a million Americans annually, and every year the epidemic grows by about 10%, according to CDC medical epidemiologist L. Clifford McDonald, MD, in a WebMD article. Those most at risk are our ever-increasing elderly population, with whom the onset of chronic incontinence while bathing must be considered in future designs of LTC facilities.

As the diagram at left illustrates, the transfer of lethal bacteria can occur during a common bathing practice. *The LOU LOU Shower Chair System* is specifically designed to eliminate the danger of patient/caregiver contamination. It is a simple and economic solution to a serious health threat.

Serious Problem

SIMULATED ACCIDENT
WITHOUT
THE LOU LOU CHAIR SYSTEM

The incontinent accident is NOT contained, causing the CNA's pants and shoes to become contaminated with waste.

Simple Solution

SIMULATED ACCIDENT
WITH
THE LOU LOU CHAIR SYSTEM

The incontinent accident IS contained and the CNA remains clean, significantly lowering the risk of spreading deadly bacteria.
